Alpha Resources Doubles Footprint
Increases Manufacturing Space with New Building

Stevensville, Michigan, September 15, 2020 – Alpha Resources LLC, the global leader in the manufacture and distribution of aftermarket consumables and certified reference materials (CRM), is proud to announce a manufacturing production expansion. The new expansion adds 30,000 square feet of additional space.

“This building is Alpha Resources’ third manufacturing space in Southwest Michigan. Initially this new space will house several lines of specialized production to help meet current demands for consumable products,” states Ken Mantei, Director of Operations. “We are excited about the growth opportunities the new space brings. With the production configuration changes we can make in the new building, we will be able to create more efficient manufacturing flow for existing Alpha Resources products. This will also allow us space for future product expansions.”

Alpha Resources’ headquarters and current manufacturing space, including the Alpha Resources’ ceramics plant, are located at 3090 Johnson Road in Stevensville, Michigan. Alpha Resources will maintain their current headquarters at Johnson Road and expand their on-site laboratory.

“Our lab constantly creates certified reference materials, but in 2020 we had several exciting company firsts – in May we released a CRM for Calcium Oxalate, AR5029, and then in July we created our first Ferrochrome CRM for carbon and sulfur, AR308,” continues Mantei. “This laboratory expansion will allow Alpha’s lab team more space and equipment to create industry leading CRM innovations.”

Additional growth at the new Alpha Resources manufacturing building is projected over the next 18 months. The company also expects to hire several additional manufacturing positions.

More information about Alpha Resources may be found on their website, <https://www.alpharesources.com>.
